PATENT

IN THE CLAIMS

The current claims follow. For claims not marked as amended in this response, any

difference in the claims below and the previous state of the claims is unintentional and in the nature

of a typographical error.

1. (Previously Presented) For use in a mobile ad hoc network formed by a

plurality of mobile ad hoc network (MANET) nodes, a first MANET node capable of collecting

route information associated with a first route from a source MANET node to a destination MANET

node, said first MANET node comprising:

a radio frequency (RF) transceiver capable of wirelessly communicating with other ones of

said plurality of MANET nodes according to an ad hoc on-demand vector (AODV) protocol; and

a controller capable of receiving incoming data packets from said RF transceiver and sending

outgoing data packets to said RF transceiver, wherein said controller receives a Path Marker Request

message generated by said source MANET node and retrieves first route topology data associated

with said first route from said first Path Marker Request message, said first route topology data

identifying all intermediate MANET nodes in said first route coupling said first MANET node to

said source MANET node.

2. (Original) The first MANET node as set forth in Claim 1 wherein said controller

stores said first retrieved route topology data in a route table associated with said controller.

PATENT

3. (Original) The first MANET node as set forth in Claim 2 wherein said retrieved

first route topology data from said first Path Marker Request message comprises an IP address

associated with each of said all intermediate nodes in said first route coupling said first MANET

node to said source MANET node.

4. (Original) The first MANET node as set forth in Claim 3 wherein said controller

appends an IP address associated with said first MANET node to said first Path Marker Request

message.

5. (Original) The first MANET node as set forth in Claim 4 wherein said controller

forwards said first Path Marker Request message with said appended IP address to said destination

MANET node via a next hop in said first route.

6. (Original) The first MANET node as set forth in Claim 5 wherein said controller

receives a first Path Marker Reply message generated by said destination MANET node and retrieves

second route topology data associated with said first route from said first Path Marker Reply

message, said retrieved second route topology data identifying all intermediate MANET nodes in

said first route coupling said first MANET node to said destination MANET node.

DOCKET NO. 2003.08.008.WT0
U.S. SERIAL NO. 10/764,129
PATENT

- 7. (Original) The first MANET node as set forth in Claim 6 wherein said controller stores said second retrieved route topology data in said route table associated with said controller.
- 8. (Original) The first MANET node as set forth in Claim 7 wherein said retrieved second route topology data from said first Path Marker Reply message comprises an IP address associated with each of said all intermediate nodes in said first route coupling said first MANET node to said destination MANET node.
- (Original) The first MANET node as set forth in Claim 8 wherein said controller appends an IP address associated with said first MANET node to said first Path Marker Reply message.
- 10. (Original) The first MANET node as set forth in Claim 9 wherein said controller forwards said first Path Marker Reply message with said appended IP address to said source MANET node via a next hop in said first route.

DOCKET NO. 2003.08.008.WT0 U.S. SERIAL NO. 10/764,129 PATENT

11. (Previously Presented) For use in a mobile ad hoc network formed by a plurality of mobile ad hoc network (MANET) nodes, a method of collecting route information in a first MANET node, the route information associated with a first route from a source MANET node to a destination MANET node, the method comprising the steps of:

receiving in the first MANET node a Path Marker Request message generated by the source MANET node; and

retrieving first route topology data associated with the first route from the first Path Marker Request message, the first route topology data identifying all intermediate MANET nodes in the first route coupling the first MANET node to the source MANET node.

- 12. (Original) The method as set forth in Claim 11 further comprising the step of storing the first retrieved route topology data in a route table in the first MANET node.
- 13. (Original) The method as set forth in Claim 12 wherein the retrieved first route topology data from the first Path Marker Request message comprises an IP address associated with each of the all intermediate nodes in the first route coupling the first MANET node to the source MANET node.

14. (Original) The method as set forth in Claim 13 further comprising the step of

appending an IP address associated with the first MANET node to the first Path Marker Request

message.

15. (Original) The method as set forth in Claim 14 further comprising the step of

forwarding the first Path Marker Request message with the appended IP address to the destination

MANET node via a next hop in the first route.

16. (Original) The method as set forth in Claim 15 further comprising the steps of:

receiving a first Path Marker Reply message generated by the destination MANET node; and

retrieving second route topology data associated with the first route from the first Path

Marker Reply message, the retrieved second route topology data identifying all intermediate

MANET nodes in the first route coupling the first MANET node to the destination MANET node.

17. (Original) The method as set forth in Claim 16 further comprising the step of

storing the second retrieved route topology data in the route table.

18. (Original) The method as set forth in Claim 17 wherein the retrieved second route

topology data from the first Path Marker Reply message comprises an IP address associated with
